New Tapmatic Marking Head For In-Machine Marking Without Second Operations.

Designed for use on CNC machining and turning centers as well as any manual turning, milling or drilling machine, the Tapmatic Marking Head imprints date, part number, description, company name, etc. on your work piece while still on your machine.

The marking head is easily positioned in the tool magazine or turret without interfering with machine components or work piece and cycles through the tool change with other tools, eliminating expensive secondary operations and additional equipment and labor.

It holds up to 15 characters, letters or numbers and also accepts custom stamps. The positive lock feature provides uniform and adjustable marking depth. It also ensures precise marking location repeatability, and rapid type or stamp changes.

The resulting mark is clear, precisely positioned and made within less than a second.

For FREE video demonstration and complete information on the new Tapmatic marking Head or Tapmatic's complete line of self-reversing, non-reversing and rigid tapping heads, contact Tapmatic Corporation, 802 Clearwater Loop, Post Falls, ID 83854: Phone: 800 854 6019; Fax: 208 773 8048 or visit www.tapmatic.com.
